

The Community Garden Program presents

Intro to Agriculture

Join us for the first, in a series, of movie nights related to agriculture and issues farmers contend with at a local, state, federal and even global scale. The documentaries will be an hour or less, followed by discussion. Light refreshments will be served.

“Genetic Roulette”

Never-Before-Seen-Evidence points to genetically engineered foods as a major contributor to rising disease rates in the US population, especially among children. Gastrointestinal disorders, allergies, inflammatory diseases, and infertility are just some of the problems implicated in humans, pets, livestock, and lab animals that eat genetically modified soybeans and corn.
